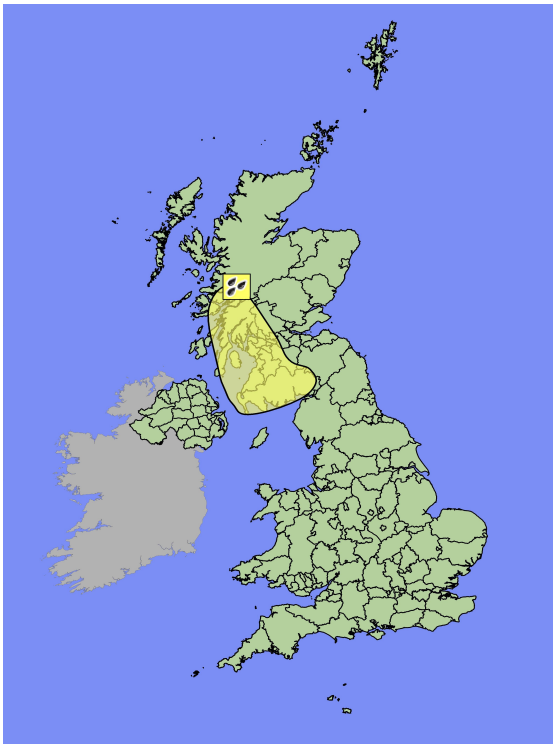
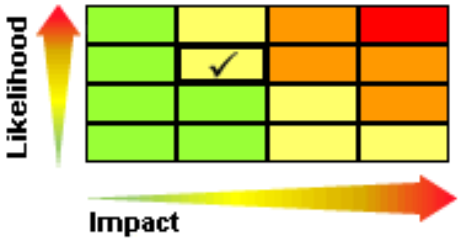
National Severe Weather Warning Service





Chief Forecasters Assessment
A slow moving front will bring some persistent and at times heavy rain to much of Scotland. 20-30mm is likely in many areas with 50mm or more possible in hillier parts of the southwest. However the location of the front and the highest rainfall totals is still rather uncertain.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **15:00 on Tue, 13th Nov 2012** until **18:00 on Wed, 14th Nov 2012**

Rain will become heavier and more persistent this afternoon and evening, the rain continuing overnight. Further outbreaks of rain are expected on Wednesday, though will gradually turn lighter before clearing southwards during Wednesday evening. Falling on already saturated ground, the public should be aware that this rain could lead to some localised disruption and the possibility of flooding.
